

Reliability & Qualification Report

| | |
|--------------------------|------------------------------------|
| Applicable Products | ASL19D, AST20D, AST30S |
| Semiconductor Technology | InGaAs Enhanced-mode pHEMT Process |
| Package Type | DFN6 |

1. Introduction

This 'Qualification Report' is to provide insight to our customers concerning the reliability of ASB's high linearity low noise amplifiers, which are manufactured by InGaAs Enhanced-mode pHEMT semiconductor process. Reliability is defined as product performance to specification over time in response to varied environmental stress. The ultimate goal of our qualification program is to achieve continuous improvement in the robustness of the product being evaluated. Finished product reliability is measured periodically to ensure that the product performance meets or exceeds internal and external qualification specifications. Qualification programs are executed in response to internal programs as well as to individual customer requirements. In-house tests are performed and supervised by experienced ASB employees per a qualification system that conforms to the requirements of ISO 9001:2000, ISO 14001:2004, and JEDEC standards. Several qualification tests are carried out periodically at our subcontractor site per its standard procedure. ASB has been ISO 9001- and ISO 14001- certified by Korea International Standards Certification (KIC) since September 2004 and October 2005. The company strives to provide cost effective and state-of-the-art solutions to its customers in a timely manner while consistently meeting or exceeding their quality, reliability, and service expectations.

2. An Image of DFN6 Encapsulated Plastic Package

A plastic encapsulated DFN6 package is assembled in our subcontractor assembly house at a highly reproducible volume with quality assurance. A very thinned semiconductor die is attached on a copper lead via thermally and electrically conductive silver epoxy and encapsulated by an epoxy molding compound (EMC) with a low thermal expansion coefficient.

(Fig. 1) An image of a plastic encapsulated DFN6 package.

3. Qualification Method

ASB employs the reliability & qualification program to ensure that our products operate reliably and consistently against various environments for a long period of time. Pursuant to JEDEC standard, the tests are carried out to monitor the possible failure modes of the products, which arises from design robustness, semiconductor manufacturing process, and assembly process. The monitoring parameters for qualification test are a device current (I_D) and a small-signal gain (S_{21}) and failure criteria are 10% change in I_D and 1 dB change in S_{21} .

4. Qualification Tests

| Test Name | Standard | Method & Condition | Sample Size (pcs) | No. of Failed Parts | Remarks |
|----------------------------------|-------------|---|-------------------|---------------------|-----------------|
| High Temp. Operating Life (HTOL) | JESD22-A108 | . 1000 hrs @ 125°C case temp . DC-biased | 64 | 0 | |
| Unbiased Autoclave | JESD22-A102 | . 96 hrs @ 121°C & 15 psig . Unbiased | 150 | 0 | |
| Temperature Cycling | JESD22-A104 | . Cycling Temp: -65°C ~ +150°C . 500 cycles . Dwell Time: 10~15 minutes . Unbiased | 150 | 0 | |
| High Temp Storage | JESD22-A103 | . 1000 hrs @ 150°C . Unbiased | 150 | 0 | |
| Solderability | JESD22-B102 | . 260°C . Dwell Time: 5 sec | 30 | 0 | |
| Moisture/Reflow Sensitivity | J-STD-020D | . Soak: 192 hrs @ 30°C & 60% RH . 3 times IR reflow @ 260°C . Unbiased | 30 | 0 | |
| ESD Human Body Model (HBM) | JESD22-A114 | . Record distribution of all failing pins | 20 | - | As in datasheet |
| ESD Machine Model (MM) | JESD22-A115 | . Record distribution of all failing pins | 20 | - | As in datasheet |
